Global Intellectual Strategies Expands Reverse Engineering Capabilities

New Wet Lab Facility marks the achievement of an important milestone in GIS' growth strategy

Ottawa, Ontario – June 16, 2008 – Global Intellectual Strategies (GIS), an Intellectual Property consulting company that provides patent and technical analyses in support of licensing and litigation has just finished construction on a wet lab facility. The opening of this new facility will be a significant catalyst for continued growth to effectively support GIS' reverse engineering capabilities.

To accommodate GIS' new wet lab facility an additional 2500 sq ft has been added to its existing 7800 sq ft facility. The new area will be equipped with a fume hood complete with custom cabinetry/benches, safety shower and eyewash station. In addition, the new facility will have extra storage for GIS' extensive parts archive, a meeting room and five additional office workstations.

Pierrette Breton, President of Global Intellectual Strategies commented, "With our newly acquired equipment, our customers will get results faster. The facility expansion will provide the space necessary for additional equipment to meet the increasing customer demand for our world class technical analysis services. The wet lab is a necessary addition to facilitate our work in the analysis of semiconductor ICs, the basic component of all electronic products".

Founded in 2000, GIS has grown to be one of the most respected Intellectual Property firms in North America. GIS' clients include some of the world's most active licensing companies and the law firms that represent them.

As licensing activity of Intellectual Property continues to gain momentum, GIS recognizes the need for the continued investment in the equipment and techniques necessary to provide quality reverse engineering results to support their clients in patent licensing and litigation.
